 2015 in the subject Computer Science - Applied, , course: ph.d,
 language: English, abstract: An overview and a derivation of
 interval type-2 fussy logic system (IT2 FLS), which can handle
 rule's uncertainties on continuous domain, having good
 number of applications in real world. This work fo-cused on
 the performance of an IT2 FLS that involves the operations of a
 fuzzification, inference, and output processing. The output
 processing consists of Type-Reduction (TR) and defuzzification.
 This work made IT2 FLS much more accessible to FLS
 modellers, because it provides mathematical formulation for
 calculating the de-rivatives. Presenting extend to
 representation of T2 FSs on continuous domain and using it to
 derive formulas for operations, we developed and extended the
 derivation of the union of two IT2 FSs to the derivation of the
 intersection and union of N-IT2 FSs that is based on various
 concepts. The derivation of all the formulas that are related
 with an IT2 and these formulas depend on continuous domain
 with multiple rules. Each rule has multiple antecedents that are
 activated...
